Traffic helper

Project Presentation for Group #5 on September 20, 2025

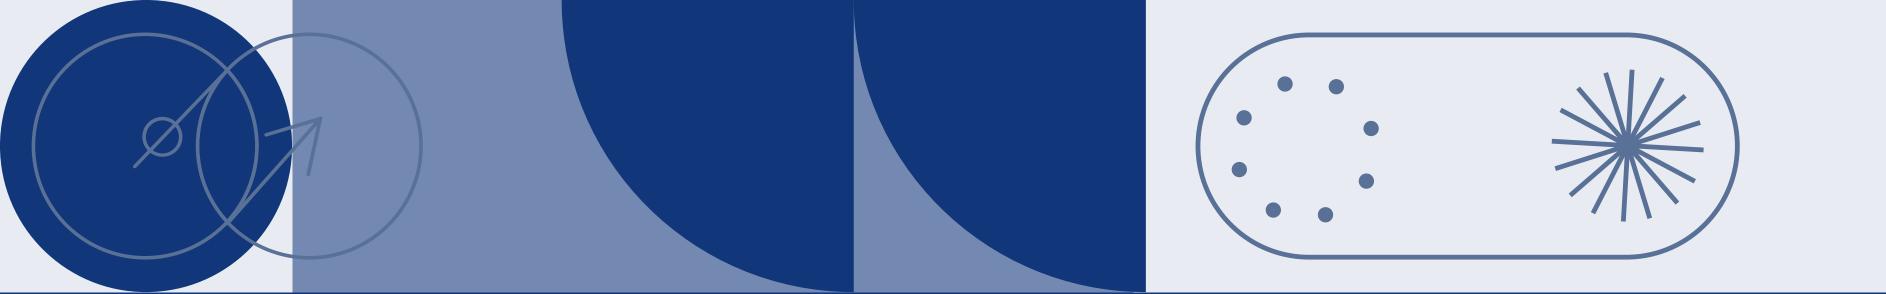

Group members

- Lorenzo Zamora 2311310409
- Siamyut Phaseeda 2311311498

Project overview

This project is a traffic light system with pedestrian crossing support, built with an ESP32, an OLED display, ultrasonic sensor and photoresistor

- Pedestrians press a button to request crossing.
- An ultrasonic sensor detects nearby cars (to delay crossing if a car is too close).
- An LDR sensor detects day/night to adjust crossing duration.
- An OLED screen shows traffic light states and countdowns.

Specifications

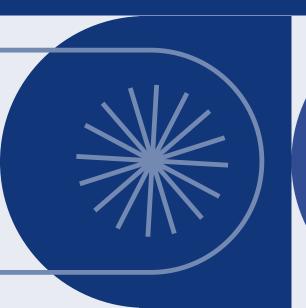

HARDWARE REQUIREMENTS

- ESP32 (WROOM32 or similar)
- OLED Display
- Ultrasonic Sensor (HC-SR04)
- LDR (light-dependent resistor)
- Push button (for pedestrian request)
- 3 LEDs (Red, Yellow, Green) + resistors
- Jumper wires, breadboard

Pins

REQUIRED PIN CONNECTIONS

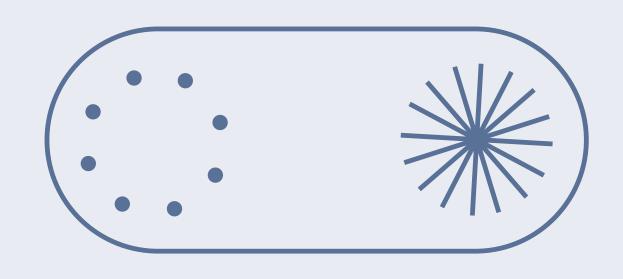

- Buttons PIN15
- Ultrasonic sensor PIN 16 17
- LDR photoresistor PIN 34
- LED R G B PIN 5 18 19
- OLED Display PIN 21 22

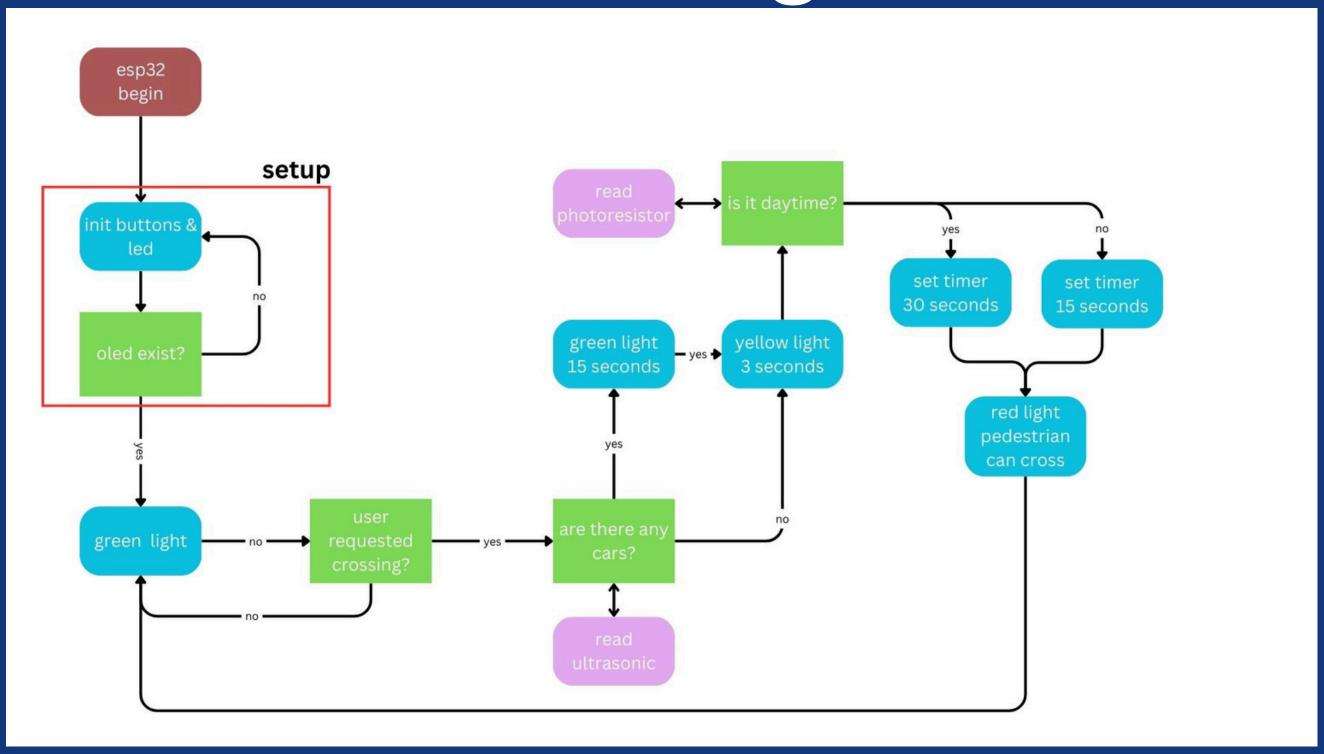

Project Flowchart

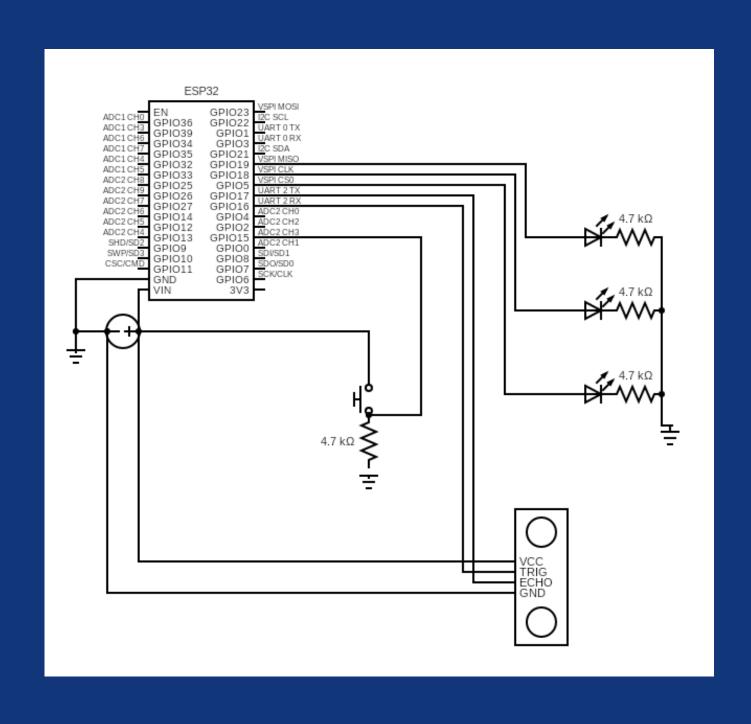

KEY PROCESSES AND ASSOCIATED CODES FOR REVIEW

- Overview of project workflow steps
- Code snippets for each process
- Explanation of key functions used
- Testing results and process adjustments
